Applications

Stainless steel V-port valves with PTFE/Viton seals are used for positioning control of water, air, oil, vacuum and other media compatible with the materials of construction. Unique 3-piece investment cast bolted body design offers the advantage of a swing-out body for easy inline maintenance. Valves can be direct mounted to air or electric actuators using the standard ISO5211 mounting pad, eliminating the need for extra mounting brackets and couplings. Suitable for vacuum service up to 29inHg.

V-port ball valves are used in applications requiring finer flow control than standard ball valves. For on/off applications use a regular full-port ball valve.

Operation

V-port valves are intended for use with Valworx 5618 Electronic Positioning System (EPS) actuators or 5610 multi-voltage actuators with Digital Positioning System (DPS) option. Valve position is controlled via a 4-20mA analog control signal.

Description

Investment cast 3-piece V-port stainless steel body/ball and stem. Adjustable live loaded stem seal packing helps compensate for wear, pressure or temperature fluctuations, extending the cycle life of the valve. Blow-out proof stem. Valve body held together with bolts for easy maintenance.

Solid, machined V-port 316 stainless steel ball provides better linearity for enhanced flow control. Note that total flow is significantly reduced in comparison to full port ball valves.
