

### Features

- Functions as diverter or selector valve
- 316 stainless steel body, ball, & stem
- RTFE (reinforced Teflon) ball seats
- Triple PTFE/Viton live loaded stem seals, adjustable
- Valves are tested per API 598
- Valve Anti-static device
- Spring Return or Double Acting Actuators
- Actuators designed for minimum 1 million cycles
- Quarter turn rack and pinion design
- Highly visible valve position indicator
- Actuator factory lubricated for normal lifetime

### Applications

Stainless steel 3-way ball valves are typically used to control water, air, oil, vacuum and other media compatible with the materials of construction. Typically used as a diverter or selector valve. Unique four ball seat design allows for full pressure at any port. Cycle times approx. 1 second per 90° rotation. Suitable for vacuum service to 29"Hg.

### Operation

Double acting actuators use air pressure to open and air pressure to close (change position) of the ball valve (4-way pilot). Spring return actuators use air pressure to open and springs to close the ball valve (3-way pilot). Actuator will work with filtered dry or lubricated compressed air. Air supply pilot pressure should be between 80 and 120 PSI. Easy to read visual valve position indicator located on top of actuator.

### Description

Heavy duty quarter turn air actuators designed for long life and tested for a minimum 1 million operations. Three port valve has a L-port flow path for diverter or selector applications. Adjustable live loaded stem seal packing helps compensate for wear, pressure or temperature fluctuations, extending the cycle life of the valve. Blow-out proof stem. Standard Namur mounting pads for optional accessories, including position confirmation switches and pilot solenoid valves.
